

ABSTRACT

The present invention provides a manufacturing method for color balls. A piece of glittery foil is cut into shredded slips
5 while the other piece of glittery foil is cut into the slips with different geometric shapes on one end. Then the shredded slips and the slips with different geometric shapes on one end are tied by two threads so as to form a downy fluffy garland. After that, the fluffy garland is coiled around a
10 hemispheric base and is attached with fixing pins, forming a color ball. This method is to increase the manufacturing speed as well as reduce the manufacturing cost.
